

## ONLINE BACKUP for BUSINESS

Automatic, Off-site Data Protection  
for your Business

### FEATURES at a glance

- Preserves all file versions
- Allows for secure file access and sharing via Web browser
- Keeps all deleted files, indefinitely
- Utilizes multiple encryption systems
- Uses very low bandwidth
- Backs up even open files
- Provides Web-based file restoration

### The Ultimate Data Protection Solution!

Overwrite a file? Hard drive crash? Natural disaster? Stolen laptop? With BitDefender Online Backup for Business, you'll have no reason to worry! BitDefender Online Backup for Business gives businesses the power to easily and securely save their data off-site and reduce the costs and hassle traditionally associated with backup solutions. BitDefender makes the process simple and automatic, so your business' data is never vulnerable to hardware failures, viruses, fire or accidental deletion. And unlike other solutions, only "changed" bits and bytes are transmitted for backup, keeping your bandwidth requirements low and fast backups.

### Simple, Safe & At Your Fingertips!

Getting started is fast and easy, with our exclusive "Physical Media Upload" service. After initial setup, your files are constantly monitored for changes, automatically encrypted, uploaded and simultaneously stored in several geographically separate data centers. Mobile users can backup their laptops from anywhere they have Internet access. Plus, all of your protected data is easily accessible and sharable from anywhere in the world, via a Web browser.

### Never Lose A Single Bit Of Data Again!

With BitDefender Online Backup for Business, you'll have the ability to assign a file monitoring policies to all your important files and documents. This powerful software will watch flagged files and continuously update every bit and byte as changes occur. Employees will never again experience the frustration and productivity loss that occurs when the documents they've been working on are improperly saved.

### So Secure... Even We Don't Have Access!

Think of BitDefender Online Backup for Business as a safe... and you're the only one with the key! This software enhances the security of your online backup through the use of a password-protected encryption. If selected, all data chosen for backup will be encrypted and will only be able to be accessed by a unique password which you create. Your data then becomes fully confidential, not even accessible by BitDefender support specialists.

**Hassle-Free Hourly Updates**

**FREE 24/7 Support**

### System Requirements

- Windows XP(32 bit), Vista (32 bit)
- Windows Server 2003, 2008
- 300 MHz processor, 30 MB hard drive space; additional free space recommended
- For off-site backup, high-speed Internet connection recommended
- For local backup, properly installed hardware (USB drive, USB key, DVD, CD, tape or any other storage media that your system may save files on) and blank media
- For off-site restore, high-speed Internet connection recommended; optional delivery on CD, DVD or portable USB disk available (service charge may apply)

## Key Benefits

### Reduces Costs

- Increases operational efficiency by automatically handling all backup activities with set-and-forget functionality, requiring no user intervention (after the configuration of the initial backup settings)
- Reduces or eliminates the high costs associated with local backup solutions, such as:
  - Allocated personnel
  - Hardware purchase, upgrade, management, sorting and retrieval
  - Restoring data from hardware
- Increases productivity by making data accessible and shareable from anywhere in the world, through a Web browser

### Ultimate Security For Your Data

- Your encrypted files are simultaneously stored in several geographically separate data centers, ensuring that your data is safe, even in case of a geographic catastrophe
- Protects from the inherent problems associated with on-site backup methods (loss, damage, mislabeling or corruption of local backup devices)
- Allows your mobile users to backup their laptops – from anywhere in the world
- Preserves all versions of a saved files, for regulatory purposes and easy recovery
- Indefinitely keeps all deleted files, for the easy retrieval of accidental deletions
- Offers the ability to backup file changes in real-time

### Makes Data Backup Fast & Efficient

- Getting started is fast and easy, even for companies with large amounts of data. With our exclusive “Physical Media Upload” service. We send you a drive for initial backup, you simply send it back for immediate upload, and you’re ready to go!
- Uses advanced “incremental change” analysis technology to watch for file modifications and only sends the “modified” portions of files over the Internet – keeping document security optimized, while minimizing bandwidth requirements
- Uses high compression methods to reduce file size and further optimize bandwidth consumption
- Also includes an easy-to-use local backup solution, which allows custom backups and the ability to write data to any local storage medium

### Makes Data Management Simple & Flexible

- Provides an intuitive Web-based management console which:
  - Allows you to restore any file, simply and rapidly
  - Allows you to easily and securely access or share any file over the Web
- Provides highly flexible backup options, to match how you do business:
  - Utilizes different backup schedules for different file types
  - Gives the ability to include or exclude files by type or folder location
  - Provides open file backup (Outlook .pst files or database files from SQL Servers, Access, Exchange Servers, file servers)
- Simple e-mail reporting to inform about successful or failed backups backups and the ability to write data to any local storage medium
