Attack surface management

PHASR

Attack surface exposure

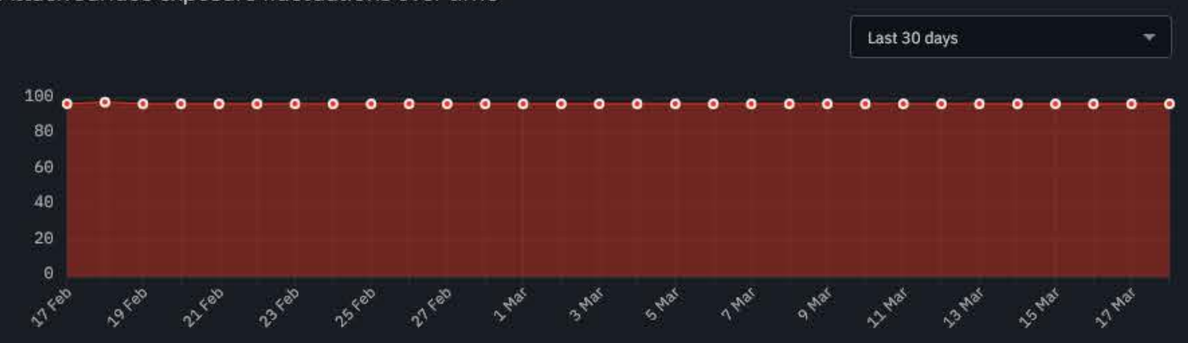
This widget shows the company's current attack surface exposure, indicating the percentage of potentially exploitable attack vectors. The goal is to minimize exposure as much as possible. Learn more

SCORE BREAKDOWN

Mitigated by Autopilot	1%
Mitigated by Direct Control	1%

Actively gathering data from 20 new behavioral profiles.

Attack surface exposure fluctuations over time



Detected incidents for monitored attack vectors categories

TOTAL INCIDENTS	10
Living off the land binaries	10
Remote admin tools	0
Tampering tools	0
Piracy tools	0
Crypto miners	0

Top recommendations by impact

HIGH IMPACT

Findstr used for searching passwords should be restricted.	8	-0.12%
Keygen software access should be restricted.	9	-0.1%
psexec.exe access should be restricted.	9	-0.1%
cpuminer access should be restricted.	9	-0.1%

MEDIUM IMPACT

osrloader.exe should be restricted from execution.	8	-0.09%
winscp.exe reading passwords from files ability should be ...	8	-0.09%
winscp.exe ability to pass an untrusted certificate's fingerp...	8	-0.09%
winscp.exe ability to log passwords should be restricted.	8	-0.09%
