

Bitdefender GravityZone Extended Email Security

Protect Email Within a Unified Security Platform

Email remains the fastest path for cybercriminals to disrupt businesses. Phishing, ransomware, and business email compromise (BEC) attacks continue to rise, with 66% of security leaders reporting an increase in BEC attacks over the past year (Bitdefender Cybersecurity Assessment Report 2025). Traditional email gateways can no longer keep pace with these evolving threats.

Modern attacks evade traditional filters by exploiting identity, trust, and user behavior. The challenge is no longer blocking bulk spam, but detecting targeted, evasive phishing and BEC that bypass traditional filters. Perimeter filtering alone is unable to stop today's attacks.

Bitdefender GravityZone Extended Email Security delivers Integrated Cloud Email Security (ICES) by unifying MX-based perimeter protection and API-driven mailbox-level detection into one solution. By combining Secure Email Gateway (MX-based) controls with API-based Microsoft mailbox protection, organizations can:

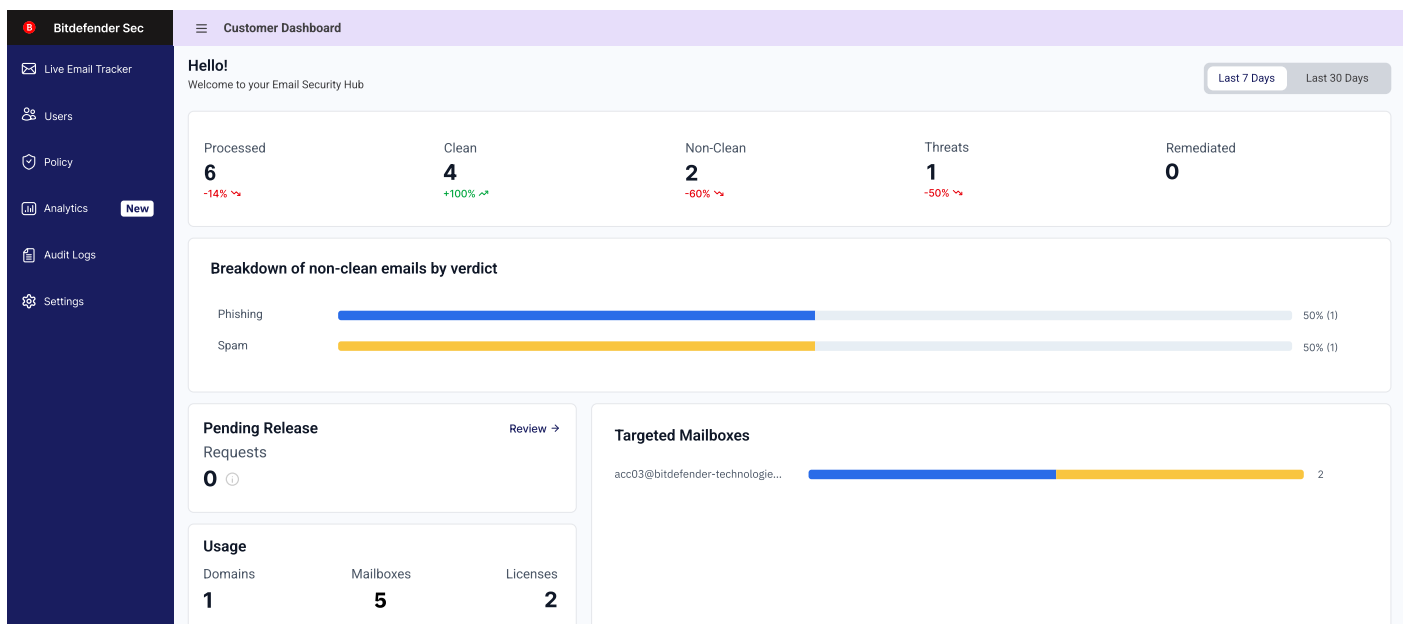

- ↳ Block threats before they reach users
- ↳ Detect and remediate advanced threats that evade initial filters
- ↳ Rapidly eliminate malicious emails across all inboxes

This unified approach closes visibility gaps and reduces dwell time to stop attacks before they disrupt operations. Because advanced threats continuously evolve and can evade initial filters, API-based monitoring remains active inside the mailbox to detect and remediate threats post-delivery. Backed by the latest threat intelligence from Bitdefender Labs, emerging and highly sophisticated threats are identified and contained quickly to minimize business impact.

Built for Modern Cloud Environments

Designed for Microsoft 365 and hybrid infrastructures, GravityZone Extended Email Security is cloud-native and API-driven, enabling:

- ↳ Rapid deployment in minutes (no MX record changes required with API deployment)
- ↳ Automatic mailbox synchronization to reduce administrative overhead
- ↳ Real-time visibility into organizational email risk across users and domains

The Unified Platform Advantage

Extended Email Security is integrated within the GravityZone platform. By contributing email telemetry into GravityZone's prevention, detection, and response workflows, organizations can:

- ↳ Eliminate siloed tools
- ↳ Reduce operational complexity and tool sprawl
- ↳ Accelerate investigations and incident response
- ↳ Lower total cost of ownership

Core Capabilities

Close the Email Exposure Gap

Stop threats before delivery and continuously monitor mailboxes to detect and contain evasive attacks that bypass perimeter defenses. This layered protection reduces dwell time, limits lateral movement, and minimizes business disruption.

Adapt Protection to Your Environment

Deploy as SEG, API-based protection, or both and apply stronger controls where risk is highest, either by domain, department, or individual user (e.g., executives or finance teams). This helps align your security outcomes with business exposure, reducing risk without adding unnecessary friction.

Simplify Security Operations

A modern, intuitive interface and easy implementation help streamline operations, investigations and response. This approach also empowers users with a controlled self-service quarantine to reduce IT workload, while maintaining centralized policy control to maintain security.

Strengthen Email Protection. Simplify Security.

Email remains the top target for cyberattacks but protecting it doesn't have to be complex. Bitdefender GravityZone Extended Email Security delivers complete and continuous protection, unified visibility, and operational efficiency — all within a single unified security platform.

Ready to simplify email security without adding complexity?

Core Features

- ↳ **Advanced Email Authentication**
SPF, DKIM, and DMARC enforcement protect domain reputation and prevent spoofing and impersonation attacks.
- ↳ **Outbound Protection & Graymail Filtering**
This prevents data leakage, protects sender reputation, and reduces inbox clutter to improve productivity.
- ↳ **Risk-Based Policy Controls**
Customize policies based on role, exposure, and business impact to enforce layered protection aligned with organizational risk.
- ↳ **TLS Encryption**
STARTTLS with TLS Enforcement enables secure, encrypted email delivery between mail servers.
- ↳ **End-user Quarantine Digest**
Self-service quarantine allows users to release messages, while keeping admins in full control through policy-based permissions. This empowers users and reduces workloads for IT teams.
- ↳ **Seamless Integration with Microsoft 365**
Deploys the solution across your Microsoft 365 environment in minutes with automated inventory sync via Azure AD and fast provisioning.

Bitdefender is a cybersecurity leader delivering best-in-class threat prevention, detection, and response solutions worldwide. Guardian over millions of consumer, business, and government environments, Bitdefender is one of the industry's most trusted experts for eliminating threats, protecting privacy and data, and enabling cyber resilience. With deep investments in research and development, Bitdefender Labs discovers over 400 new threats each minute and validates around 40 billion daily threat queries. The company has pioneered breakthrough innovations in antimalware, IoT security, behavioral analytics, and artificial intelligence, and its technology is licensed by more than 150 of the world's most recognized technology brands. Launched in 2001, Bitdefender has customers in 170+ countries with offices around the world.
