Enterprise container instances doubling YoY for the next 5 years¹
- Linux runs 90% of public cloud workloads²
- 25% of ransomware attacks are Linux based³
- Average ransomware payment, $250,000 USD⁴

Bitdefender detects 100% of all adversary techniques used against Linux systems based on MITRE ATT&CK® Evaluations 2022⁵

GravityZone Security for Containers protects container workloads against modern Linux and container attacks where they are most vulnerable—At runtime.

With GravityZone Security for Containers, organizations leverage:

- Unified visibility across all workloads, containers, operation systems and cloud infrastructure using a single platform and single agent
- Best-in-class management and security controls for Linux, featuring server workload EDR, antimalware with Hyperdetect, and risk management
- Platform compatibility with all major Linux distros
- Advanced Anti-Exploit to proactively stop zero-day attacks
- Greater DevOps agility and operational efficiency with automated security deployment and scaling

Learn more about Linux based attacks and how to secure your container workloads
