Trusted. Always.

Seamless Endpoint Detection Meets Automated AI SOC

The Challenge

Organizations need to enhance their security posture and respond in real-time to threats. Security Operations Center (SOC) operators need products to work together which requires collaboration through deep technical integration. Ideally, workflows need to be automated and work seamlessly between security solutions from different providers.

Bitdefender GravityZone

GravityZone is a business security solution built from the ground-up providing a unified management console available in the cloud, hosted by Bitdefender, or as a virtual appliance installed on-premises. The platform provides a single point for deploying, enforcing and managing security policies for any number of endpoints - of any type - in any location. GravityZone delivers multiple layers of security for endpoints, including anti-malware protection, application blocklisting and sandboxing, firewall, device control, content control, anti-phishing and anti-spam.

Sekoia Defend

Sekoia Defend (XDR) is an AI SOC platform, it allows you to easily integrate and analyze the events produced by your applications, endpoints, cloud and SaaS perimeters in real time, and it is designed with the sole purpose of protecting your assets from potential cyber threats.

The platform collects, aggregates and adds value to all your security data in real time through a unique interface, improving threat investigation, triage, and response.

Leveraging its rich endpoint and threat insights, to provide your team with full threat coverage across your cloud, on-prem, and hybrid infrastructures to detect threats and launch the appropriate response actions.

How Bitdefender and Sekoia Work Together

By integrating Bitdefender's advanced Endpoint Detection and Response (EDR) technology with Sekoia's modern AI Security Operations Center (SOC) platform, organizations can significantly enhance their security posture. This integration enables automated, real-time responses to Bitdefender threat detections and supports customized alerting.

The seamless interoperability between the two platforms facilitates faster threat mitigation, reduces dwell time, and provides a more cohesive approach to managing endpoint security—especially critical during high-priority incident responses.

Integration Fundamentals

- ▶ Bitdefender alerts are transmitted to Sekoia via the GravityZone Push Service.
- ▶ Sekoia leverages its Cyber Threat Intelligence (CTI) capabilities to detect anomalies and correlate Bitdefender alerts with other data sources.
- ▶ IN DEVELOPMENT: Sekoia's Security Orchestration, Automation, and Response (SOAR) capabilities initiate mitigation actions through the GravityZone public API.

Sekoia empowers SOC operators by delivering real-time detection and response across a wide range of security tools.

The seamless integration ensures faster threat mitigation, reduced dwell time, and a more unified approach to managing endpoint security which can be critical during high-priority incident responses.

About Bitdefender

Bitdefender provides cybersecurity solutions with leading security efficacy, performance and ease of use to small and medium businesses, mid-market enterprises and consumers. Guided by a vision to be the world's most trusted cybersecurity solutions provider, Bitdefender is committed to defending organizations and individuals around the globe against cyberattacks to transform and improve their digital experience.

About Sekoia.io

[Sekoia.io](https://www.sekoia.io) is the European cybersecurity technology company, leading provider of Extended Detection and Response (XDR) solutions based on Cyber Threat Intelligence (CTI). Its mission is to provide businesses and public organizations with the best protection technologies against cyber-attacks.

By combining threat anticipation through knowledge of attackers (Sekoia Intelligence) with automation of detection and response, the Sekoia AI SOC platform (Sekoia Defend – XDR) provides security teams a unified view and total control over their information systems. Its interoperability with third-party solutions and compliance with international technical standards enable organizations to take full advantage of their existing technologies. Sekoia.io gives its customers the means to focus their human resources on high value-added missions, optimize their cyber-defense strategy and regain the advantage against advanced cyber threats. This can be critical during high-priority incident responses.

Bitdefender is a cybersecurity leader delivering best-in-class threat prevention, detection, and response solutions worldwide. Guardian over millions of consumer, business, and government environments, Bitdefender is one of the industry's most trusted experts for eliminating threats, protecting privacy and data, and enabling cyber resilience. With deep investments in research and development, Bitdefender Labs discovers over 400 new threats each minute and validates around 40 billion daily threat queries. The company has pioneered breakthrough innovations in antimalware, IoT security, behavioral analytics, and artificial intelligence, and its technology is licensed by more than 150 of the world's most recognized technology brands. Launched in 2001, Bitdefender has customers in 170+ countries with offices around the world.
