

Bitdefender GravityZone Exposure Management

Remove attack opportunities before AI-enabled attacks strike. **Discover. Prioritize. Mitigate.**

AI has increased the volume and speed of attacks, shrinking the time-to-exploit and overwhelming teams that over-rely on reactive detection.

GravityZone Exposure Management gives you one view of risk across your critical internal and external attack surfaces, mapping potential attack paths and enabling you to effectively prioritize and remediate exposures before AI-enabled attacks can reach them. By leveraging PHASR autonomous hardening, it restricts the unnecessary access to risky tools and actions for each user and can reduce attack surfaces by 80% or more.

How GravityZone Exposure Management reduces exposure for lean teams:

Shrink the attack surface before attacks land

See vulnerabilities, misconfigurations, risky user behavior, exposed internet-facing assets and user privileges in one view, along with the paths attackers could take to your critical assets.

Quantifiably reduce risk

Track your risk posture across key attack surfaces and show improvement over time, with remediation recommendations that point your team to the fixes that matter most.

Autonomously reduce risk and improve operational efficiency

PHASR removes the effort of maintaining static hardening rules and exceptions by leveraging individualized AI algorithms to continuously and autonomously adapt hardening to changing user behavior and threats.

PROVEN OUTCOMES WITH PHASR:

BDR Group

- ✓ 7 Ransomware attacks stopped
- ✓ 80% attack surface reduction

As soon as we put it on a client site, it was like shining a torch into a previously dark corner. Suddenly everything was visible."

OWEN WHITLOCK
CTO

Greenman Pedersen

- ✓ 70% attack surface reduction
- ✓ No disruption
- ✓ 0 incidents

Knowing PHASR blocks unauthorized tools and shadow IT means I don't have to worry about those risks anymore."

JASON KRAAI
Systems Administrator

How GravityZone Exposure Management works and how it stands out

- ↳ **Risk Management** finds unpatched operating system and third-party vulnerabilities, misconfigurations and risky user behavior on your endpoints, and measures your posture over time.
- ↳ **External Attack Surface Management (EASM)** shows your organization from the outside in, identifying shadow IT, misconfigured services and exposed subdomains.
- ↳ **Unified Identities** links user accounts across your environment, so you see which accounts and privileges open a path to critical assets.
- ↳ **Attack Path Analysis** correlates the findings the platform already holds to show which weaknesses an attacker could reach and exploit, so your team fixes the most important findings first.
- ↳ **PHASR** (Proactive Hardening and Attack Surface Reduction) learns how each user works and restricts access to the tools and actions they do not need. Its autonomously adapts hardening to changing behaviors and threats.
- ↳ Available as an add-on to GravityZone Business Security Enterprise and higher, or as a standalone product that runs alongside your existing endpoint security, with no rip-and-replace.

Understand and shrink your attack surface.

Bitdefender is a cybersecurity leader delivering best-in-class threat prevention, detection, and response solutions worldwide. Guardian over millions of consumer, enterprise, and government environments, Bitdefender is one of the industry's most trusted experts for eliminating threats, protecting privacy, digital identity and data, and enabling cyber resilience. With deep investments in research and development, Bitdefender Labs discovers hundreds of new threats each minute and validates billions of threat queries daily. The company has pioneered breakthrough innovations in antimalware, IoT security, behavioral analytics, and artificial intelligence and its technology is licensed by more than 200 of the world's most recognized technology brands. Founded in 2001, Bitdefender has customers in 170+ countries with offices around the world.
